Sequence 57, Application US/08488208A
Sequence 57, Application US/08488208A
Patent No. 6124448
GENERAL INFORMATION:
GENERAL INFORMATION:
MODILATORS OF BODY WEIGHT, CORRESPONDING
TITLE OF INVENTION: WOLLEIC ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC
TITLE OF INVENTION: USES THEREOF
NUMBER OF SEQUENCES: 98
CORRESPONDENCE ADDRESS:
ADDRESSEE: Klauber & Jackson
STREET: 411 Hackensack Avenue
CITY: Hackensack
STREET: New Jersey
COUNTRY: USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NS-09-082-664-4/c

| Sequence 4, Application US/09082664A
| Patent No. 6114112
| GENERAL INFORMATION:
| APPLICANT: Jackwood, Daral J.
| TITLE OF INVENTION: Method of Making Immunogenic Compositions for TITLE OF INVENTION: Infectious Bureal Disease Virus
| TITLE OF INVENTION: NUMBER: US/09/082,664A
| CURRENT APPLICATION NUMBER: US/09/082,664A
| CURRENT PILING DATE: 1998-05-21
| NUMBER OF SEQ ID NOS: 6
| SEQ ID NO S: 6
| SEQ ID N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                              Sequence 38, Application US/09487444

Patent No. 6159697
GENERAL INFORMATION:
APPLICANT: Brett P. Monia
APPLICANT: Lex M. Cowsert
TITLE OF INVENTION: ANTISENSE MODULATION OF SMAD7 EXPRESSION
FILE REFERENCE: RTS-0133
CURRENT APPLICATION NUMBER: US/09/487,444
CURRENT FILING DATE: 2000-01-19
NUMBER OF SEQ 1D NOS: 49
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2507, Application US/09038073

Fatent No. 6194150

GENERAL INPORMATION

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: McSwiggen, James

ITILE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF INMUNE RESPONSES

NUMBER OF SEQUENCES: 2751

CORRESPONDENCE ADDRESS:

Patent No. 6350730

GENERAL INPORMATION:
APPLICANT: THE ROCKEPELLER UNIVERSITY

TITLE OF INVENTION: MODULATORS OF BODY WEIGHT, CORRESPONDING NUCLEIC

NUMBER OF SEQUENCES: 98

CORRESPONDENCE ADDRESS:
ADDRESSEE: Klauber & Jackson
STREET: 411 Hackensack Avenue
PRIOR APPLICATION DATA:

APPLICATION NUMBER: 08/485,943
FILING DATE: June 7, 1995
APPLICATION NUMBER: 08/38,31
FILING DATE: May 10, 1995
CLASSIFICATION: 514
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/347,563
FILING DATE: No. 6309853ember 30, 1994
CLASSIFICATION DATA:
APPLICATION NUMBER: 08/292,345
FILING DATE: No. 6309853ember 30, 1994
CLASSIFICATION: 514
PRIOR APPLICATION NUMBER: 08/292,345
FILING DATE: NUMBER: 08/292,345
FILING DATE: APPLICATION: 514
ATTORNY/ADATA
NUMBER: 26,742
REGISTRANICONOCKET NUMBER: 26,742
REGISTRANICONOCKET NUMBER: 600-1-087 CIP2I
TELECOMMUNICATION INFORMATION:
TELEPHONE: 201 487-5800
TELESTAX: 201 343-1664
TELEX: 133521
INFORMATION FOR SEQ ID NO: 57:
SRQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
STRANDEDUSS: single
TYPE: nucleic acid
STRANDEDUSS: single
TYPE: Nucleic acid
STRANDEDUSS: single
TOPOLOGY: linear
MOLECULE TYPE: DNA (Primer)
PDESCRIPTION: sequence tagged-site specific PCR primer SWSS1174
HYPOTHERIEL NO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Patent No. 6506587

GENERAL INFORMATION

APPLICANT: Smith, Susan

TITLE OF INVENTION: A PROTEIN THAT BINDS TO TRF1 AND METHODS

TITLE OF INVENTION: 10 USE THEREOF

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: Klauber & Jackson

STREET: 411 Hackensack Avenue, 4th Floor

CITY: Hackensack

STATE: New Jersey

COUNTRY: USA

ZIP: 07601

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION NUMBER: US/09/841,835

JOS-US-446.5-919A-8

Patent No. 5736389

GENERAL INFORMATION:

APPLICANT: Kinzler, Kenneth W.

APPLICANT: Wogelstein, Bert

TITLE OF INVENTION:

APPLICANT: Vogelstein, Bert

TITLE OF INVENTION:

CORRESPONDENCE ADDRESS:

ADDRESSE: Banner & Allegretti, Ltd.

STREET: 1001 & Street, N.W.

CITY: Washington

STATE: D.C.

COUNTRY: U.S.

ZIP: 20001-4597

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OMPUTER: IBM PC compatible

OMPUTER: IBM PC compatible

OMPUTER: ExtentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

CLASSIFICATION: 54 4

ATTORNEY/AGENT INFORMATION:

NAME: Kagan, Sarah A.

REGISTAATION NUMBER: 32,141

                           PRIOR APPLICATION DATA: including application

Patent No. 6090612

GENERAL INFORMATION:

APPLICANT: Medical Research Council

TITLE OF INVENTION: Adenylate cyclase and uses therefor

FILE REFERENCE: 14716C

CURRENT APPLICATION NUMBER: US/08/894,173A

CURRENT FILIND DATE: 1997-08-13

NUMBER OF SEQ ID NOS: 97

SEQ ID NO 9

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OTHER INFORMATION: STRANDEDNESS ; Single FEATURE:

Sequence 49, Application US/0899099A

Sequence 49, Application US/089909A

Patent No. 6103890

APPLICANT: WESURGEN, THALE

APPLICANT: WESURGEN, DAN T.

TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT OF DISEASES

TITLE OF INVENTION: OR CONDITIONS RELATED TO LEVELS OF C-FOS

TITLE REPRENUES: 21175

CURRENT APPLICATION NUMBER: US/08/998,099A

CURRENT FILING DATE: 1997-12-24

EARLIER APPLICATION NUMBER: 60/037,658
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0.7%; Score 12.2; DB 1; Length 17; 82.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 47, Application US/08998099A
Patent No. 6103890
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: JARVIS, THALE
APPLICANT: STINCHCOMB, DAN T.
TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT OF DISEASES
TITLE OF INVENTION: OR CONDITIONS RELATED TO LEVELS OF C-FOS
FILE REFERENCE: 231/175
CURRENT FAPLICATION NUMBER: US/08/998,099A
CURRENT FILING DATE: 1997-12-24
EARLIER APPLICATION NUMBER: 60/037,658
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0.7%; Score 12.2; DB 1; Length 17;

Sequence 3, Application US/09326135

Patent No. 6153606

GENERAL INFORMATION:

APPLICANT: Leder, Philip

APPLICANT: Luster, Andrew

TITLE OF INVENTION: USE OF THE CYTOKINE IP-10 AS AN TITLE OF INVENTION: ANTI-TUMOR AGENT

FILE PREBERENCE: 00383/020003

CURRENT FILING DATE: 1999-06-04

EARLIER PELICATION NUMBER: 08/464,276

EARLIER FILING DATE: 1999-06-05

EARLIER FILING DATE: 1994-03-23

EARLIER FILING DATE: 1994-03-23

NUMBER OF SEQ ID NOS: 4

NUMBER OF SEQ ID NOS: 4
                                                                                                     SEE: Jane Massey Licata, Esq. : 66 E. Main Street
ITLE OF INVENTION: of CMV Infection

Sequence 67, Application US/08294312B
Patent No. 6380369
GENERAL INFORMATION:
APPLICATT Adams et al.
TILLE OF INVENTYON: Human DNA. Mismatch Repair Proteins
FILE REFERENCE: PF106P2
CURRENT FILING DATE: 1994-08-23
PRIOR FILING DATE: 1994-08-23
PRIOR PLICATION NUMBER: 06/210,143
PRIOR PLICATION NUMBER: 08/10,143
PRIOR FILING DATE: 1994-01-27
NUMBER OF SEQ ID NOS: 78
SOFTWARE: Patentin version 3.0
SEQ ID NO 67
LENGTH: 17
                      FILING DATE: September 2, 1994
ATTORNEY/AGENT INFORMATION:
NAME: Warburg, Richard J.
REGISTRATION NUMBER: 32,327
REFERENCE/DOCKET NUMBER: 219/247
TELEPHONE: (213) 489-1660
TELEFAX: (213) 955-0440
TELEFAX: (213) 955-0440
INFORMATION FOR SEQ ID NO: 200: SEQUENCE CHARACTERISTICS: LENGTH: 17 base pairs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1657, Application US/09371772B

Sequence 1657, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Richoromb, Dan
APPLICANT: Bacobedo, Jaime
APPLICANT: Stinchcomb, Dan
APPLICANT: Bacobedo, Jaime
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
TITLE OF INVENTION: Usels of Vascular Endothelial Growth Factor Receptor
CURRENT FILING DATE: 1999-08-10

PRIOR FILING DATE: 1999-08-10

PRIOR FILING DATE: 1995-10-26
PRIOR FILING DATE: 1995-01-08

NUMBER OF SEQ ID NOS: 14225
SOFTWARE: PatentIn Version 3.0

LENGTH: 17

SEQUENCE 243, Application US/09401063

Patent No. 6623962

GENERAL INPORMATION:

GENERAL INPORMATION:

APPLICANT: Achitar, Saghir

APPLICANT: Achitar, Saghir

APPLICANT: Achitar, Saghir

TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED

TITLE OF INVENTION: FACTOR RECEPTORS

NUMBER OF SEQUENCES: 1877

CORRESPONDENCE ADDRESS:

ADDRESSEE: Lyon & Lyon

STREET: SALLE 4700

CITY: LOS Angeles

STATE: Callfornia

COMPUTER READABLE FORM:

MEDIUM TYPE: 3.5" Diskette, 1.44 MD

MEDIUM TYPE: 3.5" Diskette, 1.44 MD

MEDIUM TYPE: BECOMPATIBLE

COMPUTER: IBM COMPATIBLE

COMPUTER: IBM COMPATIBLE

CORRENT APPLICATION DATA::

APPLICATION NUMBER: US/09/401,063

FILING DATE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 0.7%; Score 12.2; DB 1; Length 17; Best Local Similarity 52.9%; Pred.
